

URL-Redirection

* How to hunt URL Redirection:

find any url parameter having some kind of tendency to redirect anywhere

* URL redirection through Path Fragment.

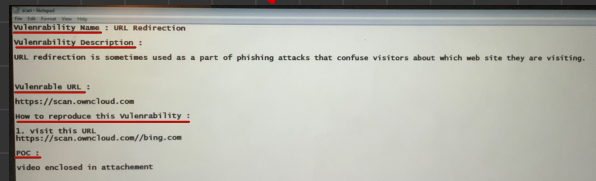

test → any.com/bing.com
or
any.com//bing.com

* you can use burpsuit to inject url automatically with powerfull payloads. in intruder attack the payload with status 3xx is working mostly.

Common Parameter List

dest uri continue window	redirect path url out	val validate callback page host data port next
view show	dir navigation	reference html
Open	url file	domain return feed site
