

Exif Geolocation data not stripped from uploaded images

Someone upload an image, I take it and see metadata with some tools or websites to see metadata info.
Search in google → [exif metadata viewer](https://exif.regex.info/) (exif.regex.info)

How to hunt?

- ① upload picture on target application
- ② download it again
- ③ use exif.regex.info to see metadata.
- ④ if you can see metadata, it is vulnerability.
because sites suppose to strip metadata.
