

## Description

- Hardly any market is growing fast than mobile applications. This service covers all threat vectors concerning Mobile Apps. The audits contain Application Run time Analysis, Traffic & Encryption flaws, Insecure Storage, Code Signing, Memory Protections, Fuzzing and Exploitation. We will test your Android and iPhone mobile applications to make sure they cannot be compromised

I will use burpsuit to intercept requests.

## Bypassing Android ssl pinning

- Download genymotion
- Download super su v 2.46 or latest
