

1 GIT Repository Found

2

3 Git is a developer's best friend except when its not used properly and exposes a site's security

4

* if you found a .git directory, → it is a vulnerability called "Git Repository Found" and this may reveal some kind of sensitive informations.

* Attacker can extract sensitive information by requesting the hidden metadata directory that version control tool Git creates.

Security:

- ↳ remove these files from production system
- or
- ↳ restrict access to git directory.

* you can find also like gits

• git • .gitignore • .hg • .bzt • .svn • CVS

if you found any of this files it is a vulnerability

? what is these files?
}

* Find source code control system using BurpSuite

- ① spider target with burpsuite.
- ② burp Tab → search [.git] search for any file

* Find source code control system using dirb

It is nothing but source code control system or credentials.

> dirb http://any.com/anything/YourList.txt

* Git Repository dumper

- gitdumper.sh on github
- > bash gitdumper.sh

lessons:

* dves-ripper tool on github

> perl rip-git.pl -v -u target.com/any/.git/

* gethacker tool on github also
